Space Energy and Transportation (SET) is a quarterly, international journal for the presentation, discussion and analysis of advanced concepts, initial treatments and ground-breaking basic research on the technical, economic and societal aspects of: space security systems, transportation to and from space (notably low Earth orbit), space-based solar power, wireless power transmission, space resources use and exploitation, space manufacturing, space settlement, and other areas related to the development and use of space for the benefit and profit of mankind.

Space Energy and Transportation is a merger of *Space Power* and the *Journal of Practical Applications in Space*. Members of the Advisory Board are from both JPAS and Space Power.

SET is published four times per year. These four issues constitute one volume. An annual index and title page is bound in the fourth issue of each year. 1996 is Volume 1. ISSN 1087-5654
